

Bubble Wheel Documentation

python GameServer.py.

python GameClient.py.

Match Client IP with Server IP

Controls

Click: Fire bubbles at mouse position

A: Position Left

D: Position Right

Bubble Clearing

Line connect 3 or more identical bubbles to clear them

Bubbles without a connection will fall

Game Loop

Score Increase: Destroy bubbles by connecting 3 or more

Out of Ammo: Using all bubbles in the bottom queue will cause new bubbles to be added to the wheel above

Wall Collision: If a bubble attached to the wheel collides with a wall, the game is over

Core Collision: If a bubble collides with the center of the wheel. The game ends with your current score

Score Calculations

3 Stars: 100% of bubbles have been removed

2 Stars: 75% of bubbles have been removed

1 Star: 50% of bubbles have been removed

0 Stars: Less than 50% or The wheel has collided with a wall
